

## SOLUTIONS

NUtec have designed a range of auxiliary components allowing easy access to HP-FB printers without the need to use the existing OEM ink configuration.

These components consist of specially designed adaptor caps and positioning plates, which offer the flexibility of choosing from any of the standard 2.5L or 1.7L NUtec UV ink products, suitable for rigid as well as roll to roll applications.

The custom designed positioning plates are used to secure the NUtec ink bottles in various HP-FB printers' set ups to further simplify and enhance the conversion process.

## HP-FB FEATURES

- Affordable OEM equivalent
- Customized Components
- Easy Installation
- Access to a wider range of Ink
- No wastage
