

SIGNTRADE News 01-2012

New solvent and UV inks from NUtec are presented at FESPA 2012

SIGNTRADE further focuses on environment responsible products. All new solvent inks from Signtrade are developed without harmful and aggressive solvents like Cyclohexanone, but still fulfil the highest standards for production requirements. In addition we offer water based inks and Bio Dome, which are also not harmful for the environment.

At FESPA 2012 in Barcelona SIGNTRADE will present several new solvent and UV inks from NUtec in South Africa. After Introduction of the innovative NUtec Emerald E12 ink at Fespa 2011 in Hamburg, the E12 became 2011 a market leader in the alternative ECO solvent market. These TRUeco inks do only contain non hazardous air polluting substances (Non-HAPS). This ink has almost no smell and can be used in office environments. In addition it offers advantages over the OEM inks, like fast drying and extremely good scratch resistance. E12 will be presented on the brand new Signracer 162+.

As the master distributor for Nutec in Europe SIGNTRADE also presents the new Sapphire S20 mild solvent inks for Konica Minolta print heads (Seiko 64, HP-8000, HP-9000) in cartridges and litre bottles. For the SWF market 2 specialized mild solvent inks for DGI (T21-X3) and HP Scitex Turbojets (T55J) were developed.

One of the major highlights will be the presentation of the UV inks from NUtec. This totally new product range will set new standards in the UV ink market. The inks have a very low smell and they are very flexible. The inks are developed for high resolution print heads like Konica-Minolta, Epson, Toshiba etc.
