New E10 Eco solvent ink in the Emerald ink range

SIGNTRADE further focuses on environment responsible products. As a second product in the Emerald ink range, SIGNTRADE introduces the new Eco solvent ink Emerald E10, which was jointly developed with Nutec.

After Introduction of the innovative Nutec Emerald E12 ink at Fespa 2011 in Hamburg, the E12 became 2011 a market leader in the alternative ECO solvent market with over 500 installations in Europe. These TRUeco inks do only contain non hazardous air polluting substances (Non-HAPS).

The new Emerald E10 inks were developed to meet the future requirements for Xi rating as well. E10 is not classified as hazardous, but more similar in the ink formulation of OEM inks like ECOsolmaxx from Roland or ECOUltra from Mutoh. The major feature of the E10 is a very high scratch and scuff resistance. Therefore E10 can replace former hard solvent products and meets at the same time the future ECO solvent regulations. This makes E10 a very unique product in the market.

Other features of the E10 inks are extremely low smell, good drying behaviour, low maintenance and compatibility with OEM inks.
