Signtrade introduces new Diamond ink

With the new Diamond ink Signtrade offers now a real ECO-solvent product to the market. The ink has almost no smell but dries faster than most other Eco inks. However, the major advantage is the 100% compatibility with Mimaki SS21 and Roland EcoSolMax inks.

Due to the chemical and colour matching character of the inks they can be used as 100% plug & play solution. No flushing or profiling is required when converting from OEM inks to D10-MS21 (Mimaki) or D10-ESM (Roland).

The Diamond inks are offered in larger 500 ml cartridges at the same price than former 440 ml cartridges. In cartridges and bags the inks are degassed to make sure that the ink can also perform well in the highest speed modes. For Mimaki the Diamond D10-MS21 is also available in the 2 liter bags compatible with the original Mimaki MBIS system.
